Navigation Animations

```kotlin
val navController = rememberNavController()
NavHost(
    navController = navController, startDestination = "landing",

) {

    composable("landing") {
        ScreenLanding(
            // ...
            enterTransition = { CustomSlideInTransition() },
            exitTransition = { CustomSlideOutTransition() }
        )
    }

// ...
}
```

Navigation Animations

```kotlin
val navController = rememberNavController()
NavHost(
    navController = navController, startDestination = "landing",
    enterTransition = { SlideInTransition() },
    exitTransition = { SlideOutTransition() }
) {
    composable("landing") {
        ScreenLanding(
            // ...
            enterTransition = { CustomSlideInTransition() },
            exitTransition = { CustomSlideOutTransition() }
        )
    }

    // ...
}
```
